Professional Summary

Full-Stack Developer with hands-on experience building and deploying a production-grade MERN stack application. Independently developed EliteCard – a live SaaS platform featuring NFC/QR-based digital profiles, real-time analytics (Socket.IO), Razorpay payment integration, JWT-secured REST APIs, and full DevOps deployment on DigitalOcean with Nginx and PM2. Comfortable working across the full stack – from React.js UI to Node.js backend to Linux server management. Actively leverages AI tools (ChatGPT, Claude, Cursor, Perplexity) to accelerate development and integrates LLM-powered features into product workflows.

Technical Skills & Tools

- JavaScript, HTML5, CSS3, React.js, Node.js
- MongoDB, RestAPI
- Git, GitHub, GitLab, VS Code, Cursor, Vercel , DigitalOcean, Deployment, Name.com

Education

- BE In Computer Engineering from KSV University during the period 2022-2026.
- HSC In Science Streams from B.M. Patel School during the period 2020-2022.

Experience Summary

ApTech Enterprise Pvt Ltd.

- Full Stack Developer - Intern

Jan 2026 - Present

Project

– EliteCard : Digital Card and Vehicle Safety Platform

- A live, revenue-ready SaaS platform where professionals create NFC/QR-powered digital profiles – and vehicle owners stay reachable in emergencies. **live** : <https://elitecard.live/>
- **Tech Stack** : React.js, Node.js, Express, MongoDB, Socket.IO, JWT, Razorpay Nginx, DigitalOcean, PM2
- Built a full-stack MERN SaaS platform enabling NFC/QR-based digital business cards with dynamic profiles, vCard export, lead capture forms, and a Free vs Pro subscription model.
- Engineered real-time analytics (Socket.IO) tracking visitor geolocation, device type, and interaction events – with role-based data retention (30-day free / lifetime Pro).
- Integrated Razorpay payment gateway with HMAC SHA256 server-side verification, order tracking, and automated transactional emails (Brevo SMTP) for physical NFC sticker e-commerce.
- Deployed on DigitalOcean VPS with Nginx reverse proxy, SSL (Let's Encrypt), PM2, self-hosted MongoDB accessed via SSH tunnel – managing complete production DevOps independently.
